

UpRev Standard Instructions:

1. Download & Install the UpRev Rom Editor from the support section of our website. www.uprev.com
2. Open the ROM Editor, Interface the UpRev cable with your Vehicle and switch the ignition to the "On" position. Once the main message in the ROM Editor displays "ECU Ready" write down your ECU part number. Example shown below of the screen

3. e-Mail your ECU Part number to etune@uprev.com, it is very important you include all of your modifications & special requests on the first email so that we can prepare the best possible base file for you. Your email subject should be your Order number. Please do not confuse your Order number with your Invoice number.
4. Once your custom file is received flash it on your ECU using the "Flash Tune File" Button within the ROM Editor tool.

5. Follow the data logging instructions included with your order, the ROM Editor tool will be used for logging & flashing.
6. email your data logs to etune@uprev.com.
7. Flashing your revised tune files repeat steps 4-6 until your final tune revision is received.

Please be sure to store your .osiris tune file in a safe location, we recommend backing it up on a cloud so that you don't risk losing the physical drive or PC in case of bad luck.
